

ProCSI 2013 Recap and Feedback

- Got to go behind the scenes to see the labs. It was too short, would like to be taught things by professors and university students.
- Didn't like how short the lab tours were. Liked how the labs demonstrated things.
- Liked staying on campus, walking tour, demonstrations. Would liked to have had a tour of the engineering campus/facilities, and some time to explain each of the different engineering departments.
- Liked getting a small taste of college, dorm life, seeing what college looks like. Seeing the labs is a motivator. Could have been a few days longer.
- Getting a taste of college, something where you learn about "the college way". Gave insight as to what to expect when you get to college.
- Liked to get behind the scenes, and got to talk to the researchers who do the research, how and why they do it. Getting a taste of what college life is like, getting more familiar with campus. Saw lots of things of what they do and where they work, would have liked to done it themselves.
- Covered the main parts of college, i.e. tour. Liked sector 67, showed what can be done as a mechanical engineer outside of school. Liked to have gone into more depth in the other fields of engineering, other than mechanical.
- Rather than seeing what classes engineers take, got to see the research that is done. Would like to have done more hands on activities.
- Liked all the tours, campus tour, motivating to become a Badger. Had issues with laser tag (haha).
